
MultiRECLAIM Registration Guide

How to sign up and start annotating

About This Study

MultiRECLAIM is a thesis project expanding an existing dataset with new examples to help AI moderation systems recognise when LGBTQ+ community members are reclaiming their own language — rather than flagging that language as harmful.

As an annotator, your lived experience and community knowledge are what make this work meaningful. Tasks are short and self-paced, and you can stop at any time.

Registration Steps

Step 1 Open the registration form

Go to multireclaim.study. You will land directly on the registration form.

Step 2 Read the information and consent

The form summarises what the study involves and is fully anonymous — your identity is never collected. At the bottom, select consent or decline, then press **Continue** →.

Step 3 Answer background questions

These cover your language proficiency, relationship to the LGBTQ+ community, familiarity with the dataset's words, and your age.

Step 4 Get your annotator credentials

Press **Register and get my ID** →. The system generates a unique email and password for you. For example:

Email: `annotator_****@multireclaim.study`

Password: `sd_***VQ$0bG8a`

Both values are clickable — click either one to copy it. **⚠ Save your email and password before leaving this page. We cannot recover them for you.**

Step 5 Create your account on the annotation platform

Go to annotate.multireclaim.study and sign up using the email and password you just received in Step 4.

Step 6 Start annotating

Read the Annotation Guide before you begin — it explains exactly what you will see and how to label each task. [Annotation Guide \(PDF\)](#) (or [download](#))

Option A — from the platform homepage: After sign-up you will see two projects: **Calibration Task** and **Main Task**. **Complete the Calibration Task first** — it is designed to familiarise you with the interface and labelling decisions. Annotators who skip it will be excluded from the study.

⚠ When you open a project, click “Label All Tasks” — do not click on individual task rows. Clicking a task row shows other annotators' work and will not let you submit your own annotation.

Option B — from your confirmation page: Scroll down on the page where you received your credentials. Under **Step 2** you will find two direct links. You need to be signed in for the links to work.

- **Calibration Task:** annotate.multireclaim.study/projects/4
- **Main Task:** annotate.multireclaim.study/projects/5
